Some things I want to include in the website:

- I want it to be responsive-ish!
 - Maybe some stuff that happens when you hover?
 - Works even if you make the browser thin (also on mobile)
- scroll-y instead of multi-page
- Relatively simple in terms of colour scheme - mostly monochrome with maybe 1 or 2 accent colours
- Somehow? Fill it with content even though I have none yet

Images I sourced/things I found helpful

Brown
#8E281F

Dark Slate
Gray
#2B3946

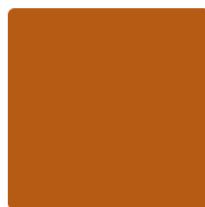

Dark Gray
#999695

Dark Slate
Gray
#0C0C11

Dim Gray
#533D3E

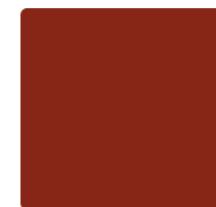

Chocolate
#BA5A12

Fire Brick
#A94521

Peru
#C06F37

Saddle
Brown
#8A2A1B

Rosy Brown
#BE8773

Both of these colour palettes were created using canva's [colour palette generator](#). They were based off of the image at the bottom of this doc, which is also the background of my site. All other content, including other images, is my own.

Some sites that helped me:

- [w3 schools](#) - help with css
- [stack overflow](#) - help with css
- [unsplash](#) - image sourcing - Unsplash grants you an irrevocable, nonexclusive, worldwide copyright license to download, copy, modify, distribute, perform, and use

photos from Unsplash for free, including for commercial purposes, without permission from or attributing the photographer or Unsplash.

- Bonus shout out to google's built in colour picker. Such a gift.

BONUS - Some things to look out for that you may not see

- The links change colour when you click on them and the ones that link somewhere else open in a new tab because I hate having to use the back arrow on sites (personal pet peeve)
- The images become transparent-ish when hovered over
- It really does change if the browser is thinner (success!)
- I just hope you enjoy the content. I kind of made it up.
